

Role : Intern

Job Function: Frontend

Location : Bangalore (M-F Onsite)

Duration: 6 months

About us

Lucidity is a rapidly growing company with a first of its kind and impactful product in the cloud storage. Joining Lucidity offers the opportunity to work on cutting-edge technology, solve real-world

problems for major enterprises, and be part of a company that is reshaping the future of cloud storage.

- We were also awarded **Best Infra and Dev Tools SaaS Startup** by SaaSBoomi – [Link](#)
- Listed among India's Top Startups 2nd time by LinkedIn - [Link](#)
- We are backed by \$32 M in funding from investors like Alpha Wave Global, WestBridge Capital, and Beenext - [Link](#)
- We are the category leader in cloud storage optimization.
- Trusted by major enterprises, including Fortune 500 companies spanning across the US and the UK, being the major Markets.
- Opportunity to work with experienced co-founders [Vatsal](#) & [Nitin](#) - serial entrepreneurs who bring with them more than a decade of experience working with companies like Microsoft, Swiggy, and Tracxn and building and selling large tech products.
- Work in deep tech company and be part of an accelerated growth journey
- We have a presence across India, Abu Dhabi, the US, and the UK.

What we do

Lucidity is a company that provides an automated NoOps disk auto-scaler for cloud storage across AWS, Azure, and GCP. It addresses over-provisioned block storage by dynamically scaling capacity, increasing disk utilization to around 80% from 25-35%. This results in cost reductions of up to 70% for businesses.

Here's a [video](#) of what Lucidity does.

Key benefits include:

- **Significant Cost Savings** on storage (especially EBS costs).
- **Elimination of Downtime** by preventing disk space issues.
- **Reduced DevOps Effort** through automation.
- **Application Agnostic** solution works with various systems.

Technology is at the heart of our organization. As part of the tech team you will :

1. Understand product requirements and brainstorm ways to address them
2. Build features from scratch and have complete ownership for it
3. Deliver efficient, reliable, scalable code with high automated test coverage
4. Contribute to team decisions in the overall architecture and practices of the company

What you'll do

At Lucidity, Front-end Engineers play a vital role in developing user interfaces and ensuring seamless interactions with cloud-based applications and services. Their responsibilities extend beyond creating visually appealing interfaces to integrating with cloud services and technologies.

What you'll need

Must Haves :

- Strong understanding/ experience of modern web technologies: JavaScript, HTML5, CSS
- Experience in creating web frameworks: ReactJS
- Strong understanding / experience with REST API development and integration with back-end systems.
- Strong understanding/ experience in contributing to architecture, design, and product implementation.
- Basic understanding of responsive design and UI/UX principles
- Strong problem-solving skills and attention to detail
- Ability to write clean, readable, and maintainable code

Good to have

- Collaborative mindset to work with infrastructure and DevOps teams for optimising deployment and hosting in cloud environments
- Exposure to AWS/Azure/GCP is advantageous.
- Familiarity with building automation scripts to support Continuous Integration and Continuous Deployment (CICD) pipelines.

Additional

- Academic background in Computer Science or equivalent
- Contribution to open-source development projects
- A self-starter and able to perform with minimal direction

Why us

We're hiring a set of highly skilled, enthusiastic and passionate people who thrive in a high growth environment. We believe the best way to grow is to give everyone the opportunity to pursue their interests. At Lucidity, you have complete freedom to work on projects that interest you.
